

TWO STEP MANTOUX PPD SKIN TEST/BLOOD WORK

A two-step PPD/Quantiferon Gold/T-Spot TB blood test is required for all employees upon enrollment. **If 1st step is negative, the 2nd step should be administered no earlier than 7 days and no later than 21 days after the date the 1st step was placed.** If 1st step/Quantiferon Gold/T-spot TB blood test is positive, then 2-view X-Ray should be done. *If you have a history of a positive skin test (this includes a new positive result), you are required to complete a chest x-ray, which must be submitted along with the lab report to the positive test. Chest x-rays without documentation of a positive blood test WILL NOT be accepted.
